

Product Description

Océ banner tape is a special 400 µm thick adhesive on a film release liner. The tape has a very high adhesive performance on vinyl banner media including PVC-coated textile banners and is used for bonding banners (hemming of edges). Use Océ banner tape for short to medium-term applications. The adhesive has an excellent aging and weather resistance, as well as an outstanding temperature resistance. The release liner with finger-lift feature ensures an easy application.

Physical Properties

Thickness adhesive	400 µm		Adhesive type	Acrylic, permanent	
Thickness film liner	36 µm		Adhesion (24h on steel)	min 25 N/25 mm	AFERA 5001

Outdoor Use

Suitable for short to medium-term applications. Océ Banner Tape is unsuitable if the banner is for long-term outdoor use or if the banner will be exposed to high winds. In these instances professional finishing, with welded seams or stitched seams with nylon reinforcement and bungee cords for flexibility, is recommended to safeguard the lifespan of the banner.
